DESCRIPTORS: *Cyclohexadienes, Polymerization,
Heat of reaction, Peroxides, Reaction Kinetics.

The polymerization of cyclohexadiene is described for
the case when the reaction is initiated by heat and by
peroxide. It was established that in thermal initiation
the original centers of polymerization are produced
as the result of a bimolecular reaction involving the
formation of a diradical. The reaction has an ex-
tremely low frequency factor. The diradical center
vanishes during the autosaturation and cyclization
reaction (provided there are no steric hindrances
